10th Newsletter

Students take over Newsletter to explain their experiences studying the Master MEHMED

From Mohamed Zeriah

"My name is Mohamed Zeriah, from the University of Sidi Mohamed ben Abdullah in Fez, I obtained a specialized master's degree for the first batch of Master MEHMED for the year 2022. In my opinion, the study of environmental and climatic changes is one of the most important topics that can be worked on at the present time, especially in the Mediterranean field, which It is the focus of the most important population centers in the world, and the accompanying changes and various environmental phenomena, as these environmental changes constitute the most important obstacles that prevent the achievement of sustainable development and progress.

Among the phenomena that concern me and the world's attention as well, are the climatic changes that the world is currently experiencing, such as drought and urban expansion at the expense of vital areas...etc."

"Through this multidisciplinary master, there are hopes to open up the field and job opportunities for graduates in order to search for appropriate solutions to limit the aggravation of these environmental changes.

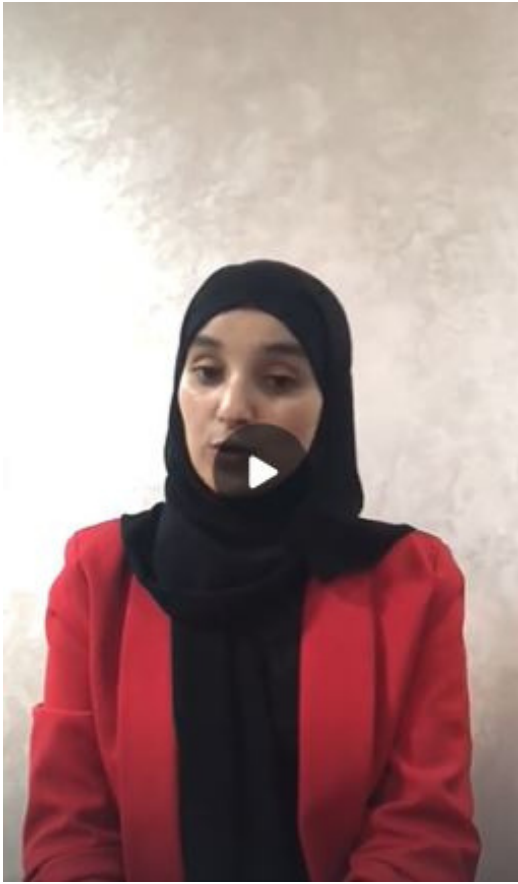

Through my experience in this Master, I noticed that there is a great incentive on the part of professors and students in order to achieve higher goals in the field of environmental changes, through good training, discipline and student interest in this matter.

One of the things that I hope to develop in this master is to create permanent communication between students from different disciplines, and to create an atmosphere of interaction between them to work together to achieve the general goal of "reducing environmental changes", by combining disciplines, and studying phenomena from different angles and jointly. .

Through this training, I look forward to working on some of the environmental changes that Morocco is aware of, such as fires, scarcity of water resources ... etc."

From Souad Moutaki

Souad Moutaki explains her experience in a short video that you shouldn't miss out.

From Hajira Dakhouch in french

"Je m'appelle Hajira Dakhouch, j'ai 24 originaire marocaine, j'habite a Oujda et je suis une étudiante en faculté de science Mohammed Première de Oujda.

Se former dans le domaine de l'environnement, c'est s'engager à mieux connaître les enjeux environnementaux. Le domaine de l'environnement est très vaste et la Méditerranée est une région plus durement touchée par les changements climatiques."

"Ce qui m'inquiète le plus c'est le changement climatique Comme la région Méditerranéenne. Celle-ci fait partie des points chauds qui souffriront les premiers du réchauffement.

Le réchauffement des températures ou toute modification aux paramètres climatiques ne peut faire autrement qu'engendrer des impacts sur l'environnement et l'activité socio-économique. En effet, les «secteurs» comme l'agriculture, la foresterie, les écosystèmes, les infrastructures, les pêches, la gestion de l'eau, le tourisme, l'activité économique, la production et la demande d'énergie, en sont tous qui se sont ajustés aux paramètres climatiques."

"Oui bien sur je pense que cela va ouvrir de nouvelles opportunités futures pour les personnes formées puisque cette formation sur l'environnement qui est très vaste et c'est le thème de notre jour.

Le master a également pour objectif de se spécialiser dans le domaine de l'environnement plus la région Méditerranéenne, le master va alors servir à se spécialiser et à approfondir nos connaissances et d'autres informations. Les cours sont variés, De plus ce qui est différent dans ce master il nous permet de présenter des exposés en anglais .

Ce qui doit être dans ce master c'est de pratiquer la langue anglaise et pourquoi pas d'autres langues car ils sont importants de s'en avoir en moins quatre langues .

Je recommande ce master à d'autres étudiants car notre planète est aggravée par les problèmes environnementaux et il nous faut l'amélioration de la gestion des problèmes de l'environnement.

J'aimerais travailler dans le domaine de prévention des risques environnementaux."

From Maissa Chouchane

We have interviewed also Maissa Chouchane who is an Algerian girl of 24 years old that specialised in Environmental Urbanism and currently is graduated on the master Mehmed and also teaches History and Geography in middle school.

Regarding the importance of training in relation to environmental and climate change in the Mediterranean she agrees that it is a very relevant and wealthy area which is a major factor to maintain the ecological process in the world. As per what worries her most, she says desertification and drought are the most significant topics to worry about and it opens up new future opportunities for trained people.

When asked about the positive aspects of the master she said: "In my opinion the most positive aspect of this master is that it allowed me to link my speciality as an urbanist to the environment. I would recommend the Master to other students, because this type of masters about the Mediterranean is very rare."

At the end of our talk we asked her about her plans for the future after the master and what she would like to work on and she told us she is currently working as a teacher to pass the awareness of environmental and climate change in the Mediterranean, and in the meanwhile she's working on projects and maps about land-use and land-cover change in some areas in Algeria.

From Mohamed Bettahi

We have also received the answers to our questions from Mohamed Bettah from University of Mohammed First, Oujda Morocco as student of the specialized Master degree "Mediterranean Environment Change Management".

He explains: "I think it is important to train in relation to environmental and climate change in the Mediterranean because this region is one of the most influenced by environment changes and as population of this area we are affected. About environmental change, global warming is the most which is make me worry. This phenomenon has an effect on the entire planet.

In my opinion climate change is the topic who takes a lot of attention because it is about the future of humanity and that is why it opens up new future opportunities for trained people.

The most positive aspects of the Master are the presence in several countries that are affected by climate change and the wealth of information."

When asked if he would recommend the Master and which are his plans once he finished the Master he says: "I would recommend the Master to other students because I learned a lot from this formation and also for its future opportunities and after the master, I would like to work on the degradation of Mediterranean beaches and also elaborate their geomorphological and habitats map in order to understand the reasons and study the sea level."

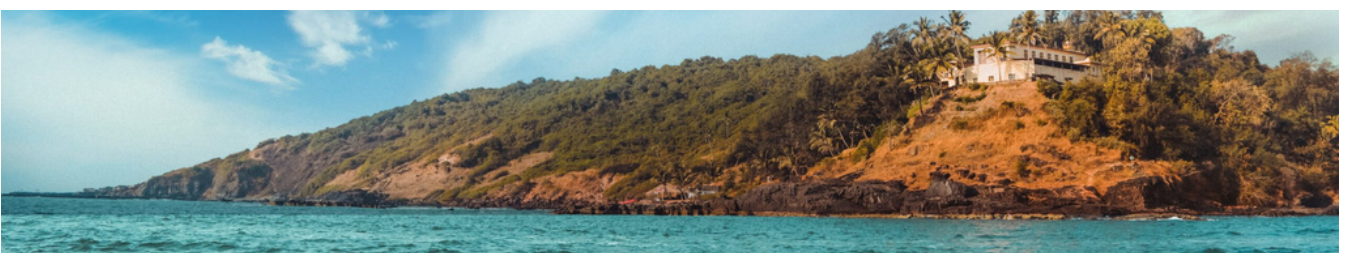

Thank you very much to all the students that shared their experience with all of us and we hope for a bright future for all of them.

MEHMED E-learning Platform

You can join the master Mehmed community checking our [website](#).

Inside the platform, login is easy and allows you to access to the forum where interaction between students and teachers is taken.

For now, more than 800 students have chosen our platform to study the Mediterranean Environmental Change Management Master.

MEHMED E-LEARNING PLATFORM

Master Study and Ecosystem Building (MEHMED) aligned with the EU Bologna educational approach (duration of 2 years, 120 ECTS).
