MEDITERRANEAN ENVIRONMENTAL CHANGE MANAGEMENT
MASTER STUDY & ECOSYSTEM BUILDING

The Mediterranean basin is famous for its natural diversity, but also an area with pressing environmental problems.

Apart from general issues such as waste management, water and air pollution and their effects on the population's health, these countries face severe challenges through desertification, deforestation and threats to biodiversity caused directly by environmental change and with severe implications for their economies, especially regarding agriculture and the tourism sector.

change management will be crucial to seize socioeconomic opportunities linked to environmental change and minimize its risk.

MEDITERRANEAN ENVIRONMENTAL CHANGE MANAGEMENT MASTER STUDY & ECOSYSTEM BUILDING

***Editorial**

This project stems from the will of a whole group of Western Mediterranean universities to weave an alliance aiming at training and preparing actively and collaboratively our students for the greatest environmental and social challenges facing the entire planet and especially our region: the environmental change.

A key concept that must be retained in our mind and that includes changes in atmospheric composition, as well as in land use and land cover or the arrival of invasive species among many others - all under the persistent impulse of climate change. The consequences that derive from this new environmental reality are multiple with a direct impact on agriculture, tourism and other economic activities, perhaps impacting on social and political stability and posing at risk the rich natural and cultural heritage that characterizes the Mediterranean basin.

Faced with this situation, it is necessary to react by training a new generation of technicians, engineers and managers that are capable of facilitating both the adaptation to this new reality and preventing future aggravation from the minimization of the impacts derived from human activity.

In this context, the MEHMED project implicating the implementation of a master's degree on environmental change in eight partner universities of the Maghreb represents both a need and a great opportunity for the future. Either for the students who participate or the professionals and technicians who want to upgrade in the field of environmental change management in the Mediterranean. We encourage you to get involved, to give support and to participate. Take advantage of this project!

We would like to acknowledge again the European Union for the financial support received through the Capacity Building program of the Education, Audiovisual and Culture Executive Agency (EACEA).

"Moreover, we encourage you to actively participate and support this key project facing the future of our countries and the entire Mediterranean region. We cannot mortgage the future of young people and future generations, but we must work together for a future with hope".

MEDITERRANEAN ENVIRONMENTAL CHANGE MANAGEMENT MASTER STUDY & ECOSYSTEM BUILDING

***Editorial**

In recent years, the demonstrations experienced by the population have been especially circumscribed to the environment of climate change, so for example severe floods or drastic droughts have affected the future of many countries and many people. This kind of situation, that has been amply documented, is having a much harder impact on the Mediterranean countries, among other large regions of the planet. Therefore, the Mediterranean is one of the areas where both training and policies urgently need to be adapted to this new environmental, economic and social reality.

This year, the importance of environmental change has been dramatically marked by the COVID-19 pandemic, which is linked to unsustainable development models that have favoured deforestation processes and land use and land cover change in many parts of the planet. This terrible pandemic that has endangered the economic well-being of our countries, by for example producing a dramatic reduction in tourism – one of the main economic sources in most Mediterranean countries – ultimately threatens the well-being of many people. In fact, this is another derivative of the environmental change. **Therefore, training and research become key aspects in helping people to have the knowledge and skills that should allow us to redefine our economy, our society and our lives to be more resilient to this new scenario of present and future.**

We would like to wish you a Happy New Year 2021!!
